

Mobile Archery Range Set-Up Instructions

1. Set out tarp under the area where you would like the archery range to be placed. Make sure there are no sharp objects that could damage the range.
2. Remove the mobile archery range from the black bag then unroll the archery range on top of the tarp, with the air sleeve towards the right back of the setup.
3. Attach the inflation attachment to the blower unit by using the straps to tighten the sleeve around the blower unit (squeeze the metal buckle piece to adjust). Next, turn it on.
4. Place the balls above the cones of air.
5. Place the bow and arrow stand where you want the scouts to be standing and place the arrows in the holes. Hang the bows as shown in pictures.
6. Put the two feet mats with the arrows pointing towards the range about 15 feet away. This is where the participants will shoot from. Use the cones to mark areas.
17. Enjoy and have fun!

Setting up the Pop-Up Tent

1. Remove the straps from around the metal stand.
2. Gradually pull apart the metal legs. Place the 4 corners of the blue tent fabric over the legs and align the middle with the peak on the metal.
3. Keep pulling the metal legs apart. The middle will start to rise up as they are pulled apart.
4. Push down on the red button to change the height of the legs. Pull them higher until you hear a click of them locking in place.

Mobile Archery Range Take-Down Instructions

1. Take down the balls and place them in the large black totes.
2. Turn off the blower unit and let the mobile archery range deflate and collapse on itself. (Hint: You will need to help the piece collapse by pushing the air towards a vent. Laying down and rolling on it helps)
3. Make sure the mesh square is on top when you have it deflated. Fold it in on third from the back side, making sure to get all the air out of it.
4. Fold in one third from the opposite side
5. Place mobile archery range in black bag

Taking Down the Pop-Up Tent

1. Click the red button to lower the metal legs.
2. Begin to push the legs together.
3. After it begins to collapse, remove the blue fabric top from the metal legs and fold it up.
4. Continue collapsing the metal legs until it is completely folded together.
5. Place the Velcro straps around the legs
